

In the claims:

Kindly amend the claims as follows:

Pub B2 *A1* 1. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
a monitor for monitoring a wake-up signal generated by the stored-
program control and transmitted to the monitor by the controller.

Pub E1 2. (Amended) The device according to claim 1, further comprising a monitor for
monitoring a wake-up signal generated by the stored-program control and transmitted to
the monitor by the controller.

A2 *Pub B3* 8. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
a monitor for monitoring a wake-up signal generated by the stored-
program control and transmitted to the monitor by the controller.

A3 *Pub B3* 13. (Amended) A safety device for a stored-program control, comprising:
a controller for exchanging data with the stored-program control, the
stored-program control being external to the safety device, and for exchanging data, via
a bus system, with a peripheral to be controlled; and
